

Emulsion Polymerization - Global Product Line

Cognis as a global supplier offers a wide range of surfactants, designated for the use in Polymerization processes. In the past this products have been known under different brand names as Maranil, Texapon, Aviroil and others. To improve a clearly identifiable product line and to simplify your search for adequate raw materials decision was made to implement a global re-naming process combined with a global product harmonization process for the Polymerization segment in 2005.

All Cognis surfactants, especially designed for use in emulsion polymerization technologies, have been re-named and transferred to the **Disponil** brand name, with some minor exceptions for defoamers and wetting agents. The brand **Disponil** is well known and synonyms already for surfactant specialties used in the Emulsion Polymerization Industry. The product designations are valid since 1st of September 2005.

This reference list is containing new and old names as well as some further basics information as chemical characteristics and country of origin.
